

GSU/ GBI After action report - February 27, 2009

We completed the following live situation tasks onsite at GBI;

1. Tested C8 reporting on the GBI Server.
2. Carried the OLAP classroom material over to the live server and instructed on migrating/moving the 7.3 Transformer models to 8.4 PYJ and MDL files.
3. The datasource .mdb files could not be found on the GBI server - Dr Friedmann is contacting CMU to retrieve the data files.
4. We migrated the ICD cubes using Framework Manager to the GBI C8 content store. We tested the cubes via the various reporting studios - all cubes generated acceptable reports.
5. We reviewed how to implement security to secure the C8 server.

Additional follow-up: Dr Friedmann would like to arrange a second training engagement for Framework Manager and Report Studio. He estimates to conduct onsite training the end of March - early April.
